

Cirris Server 2011.4.0 Release Notes

WARNING: Before installing a new version of the Cirris Server software, be sure to make a copy of the files in the database directory. Due to the nature of the changes made during this release, we strongly recommend that you update all test stations on the network at the same time. Failure to do so could compromise the quality of the tests done on test stations using earlier versions of the easy-wire software.

New features in the Cirris Server 2011 release

EasyTouch Server Support

easy-wire is the software platform for the newly released [EasyTouch](#) hardware, the newest addition to our Signature bench top hipot testers. EasyTouch is a PC based tester running a Windows 7 Embedded operating system. A PC is built right into the tester box giving the operator all of the benefits of a Cirris adapter based tester and the power of the Windows OS. This hardware will support networking, printing, optional keyboard, mouse, and monitor, and USB access and is all bundled up with a giant 10.4 inch touch screen display and a high quality, high speed tester that you have come to expect from Cirris. Contact your sales representative today to learn how you can get your hands on this exciting new technology.

General Software Improvements

For this release we have fixed several bugs and other inappropriate data handling behavior exhibited by earlier software. This was in response to customer requests, improvement suggestions, and our in-house testing.

The 2011.4 Cirris Server Software is the current version to run on Windows7, Windows 2003 and Windows 2008 Server editions.

The 2011.4 Cirris Server Software works with the EasyWire/EasyTouch client software 2011.3. If you have upgraded your tester clients and wish to network them together to use one common database, then the 2011.4 Cirris Server Software is required.

We are also continually improving, refining, and redesigning the software to insure that it works as well as possible. We would appreciate your feedback. If you have questions, concerns, or software suggestions regarding this release, or any other release of Cirris software, please contact your Cirris representative by calling 1-800-441-9910 or email us at info@cirris.com .
